

Modernize d Storefront Experienc e in Storefront Next

Storefront Next delivers a modernized ecommerce experience through the Market Street template. The Product Listing Page (PLP), Product Detail Page (PDP), and My Account page provide an enterprise-grade default interface with comprehensive core commerce capabilities, rich media galleries, advanced discovery controls, AI assistance, and omnichannel integrations.

For implementers, these pages establish a full-feature blueprint that accelerates implementation for the broader integration ecosystem—ratings providers, loyalty programs, Buy Now Pay Later (BNPL) services, store inventory systems, and AI conversational assistants.

Adapters for Implementing Data Sources

new Storefront Next storefront immediately presents a credible, polished experience, which increases the overall conversion rate.

- Fast time to value: Implementers and merchants start with a proven blueprint instead of rebuilding standard patterns. Because the basic UX scaffolding is already in place, project teams can focus on brand differentiation and integration rather than basic page construction.
- UI components for ecosystem integrations: The storefront exposes standard, stable UI components for ratings, loyalty programs, BNPL providers, and store inventory. These shells give independent software vendors (ISVs) consistent placements to target, minimizing one-off custom front-end work.
- Vertical storefront foundation: A comprehensive but generic PDP and PLP create a reusable base across industries. Implementers can specialize and configure this foundation for verticals like luxury beauty, fashion, or electronics with

Some components, such as delivery estimate, ratings, and reviews, are a prototype of the intended storefront experience. They aren't connected to B2C Commerce for data persistence. Although these components render in the UI, their data is temporary and is lost when the page refreshes. To connect these prototyped components to a third-party service, modify their corresponding extensions. See [Extend Storefront Next with Features](#) and [Prototyped UI Components](#).

Product Listing Page (PLP) Features

The PLP offers a rich browsing interface that enables shoppers to find products quickly, increasing conversion rates.

Discovery

- Enriched product tiles: Display ratings,

on sale, online-only, limited editions, or on promotion.

- Filtering: Filter by a store selected in Store Locator and by specific product criteria.
- Sorting: Sort products by best matches, price, top sellers, and so on.
- Omnichannel: If a store inventory integration is active, view store availability and in-store pickup badges on product tiles.
- Merchandising: Use defined content slots above and within the product grid for banners, quizzes, and editorial content.
- Shopper Agent: Access an AI-assisted shopping experience that helps shoppers discover products through a conversational chat interface. Enable and configure Shopper Agent before it's available in Storefront Next. See [Agentforce Shopper Agent for B2C Storefronts](#) [↗](#) in *Salesforce Help*.

Purchasing

- Quick add: View a mini-PDP popup to add a product to the cart without navigating to the full detail page.

Product Detail Page (PDP) Features

The PDP gives shoppers detailed product information and flexible purchasing options, which implementers can provide by using payment providers.

Discovery

- View ratings summary and review count, and an optional AI-generated summary review using provider data. The ratings and reviews section supports pagination or load-more behavior.
- View product recommendations. Implementers can provide data sources for recommendations through adapters.
- View recently viewed items displayed as product tiles.
- Check availability and inventory status: in stock, low stock, out of stock, backorder, and pre-order states.

Purchasing

- Add the product to the wishlist.
- View a delivery estimate.
- Choose delivery or in-store pickup, or

option, including payment plans and express payments such as Apple Pay, Google Pay, and Venmo.

Implementers can provide payment services through adapters for payment providers, including BNPL providers.

My Account Page Features

The My Account page is a one-stop shop for managing all aspects of the shopping experience. From this page, shoppers can:

- View recent orders and product recommendations from the overview page.
- View and manage their wishlist.
- View full order history.
- Manage saved addresses.
- Add and manage payment methods.
- View store preferences, including their preferred store and authorized pickup contacts.
