Enhance Shopper Experience with Store Locator and In-Store Pickup

With store locator, shoppers find stores near a specific zip code or their current location. With in-store pickup, shoppers choose whether to pick up a product at the store or have it

flexibility and convenience, boosting in-store sales while meeting diverse shopper needs.

In-store pickup depends on the Shop the Store feature, which enables shoppers to refine search results for a specific store. Shoppers refine search results and category-browse through the In Stock checkbox on the Product Listing Page (PLP). For more information, see [Shop the Store](#)  in *Salesforce Help*.

Find nearby stores by entering a zip code or by using geolocation.
