

Limit Access to a Storefront Under Development

Contents

- [Enable a Protected Storefront](#)
- Limitations

To limit access to a storefront that's under development to only users from your Managed Runtime (MRT) organization, enable Protected Storefronts in Business Manager for the associated site. The protected storefront's environment requires a basic auth password that organization users provide.

Enable a Protected Storefront

1. Make sure the correct B2C Commerce instance and site IDs are configured for the MRT environment. To verify these settings in [Runtime Admin](#), go to the project and environment, and then click **Environment Settings**.
2. (Optional) For storefronts not created in Business Manager or through site export & import, connect them to B2C Commerce. See [Connect an Existing Storefront to B2C Commerce](#).
3. Set the site status and options.

[Try for free](#)

Online (Protected) .

c. Select **Access using shared password**.

d. Enter a shared password.

e. Deselect the **Access using user's password or access key** and **Access using Storefront Toolkit** options because they don't apply to PWA Kit storefronts or Storefront Next. Apply the changes.

Changes can take up to 5 minutes to take effect.

Limitations

- Protected Storefronts support only the shared password option.
- For multi-site storefronts, enabling Protected Storefront on any one of the associated sites results in the environment requiring a basic auth password. If sites are configured with different passwords, the environment accepts any of the passwords.
- For sites associated with multiple MRT environments, enabling Protected Storefront results in all environments requiring a basic auth password.
- For sites with Protected Storefront enabled before you associated a Managed Runtime environment, disable and re-enable the Protected Storefront settings for the changes to take effect.
