

Automate Environment Variable Management with the CLI or API 

Storefront Next / [Deploy and Manage Storefr...](#) / [Automate Envir...](#)

# Auto mate Enviro nmen t Varia ble Mana geme nt with the CLI or API

## Contents

[Manage Environment Variables with the B2C CLI](#)

[Manage Environment Variables with the Managed Runtime API](#)

[See Also](#)

Instead of using Runtime Admin to manage environment variables from the UI, automate the environment variable administration with the B2C CLI or the Managed Runtime API.

### Note

Also, acces  
s  
envir  
onme

js by  
using  
process.  
env  
[↗](#).

## Manage Environment Variables with the B2C CLI

Use the B2C CLI to list all environment variables for an environment, update an environment variable value, and create environment variables from an environment file.

### Note

The B2C CLI examples use placeholder values for the project and the environment.

Try for free

```
<placeholder>
- value> .
Replace placeholder
with the actual
values for your
storefront.
To get the project
ID, see Find a Project.
```

## Set Up the B2C CLI

For installation instructions, see [B2C CLI](#), [MCP and Tooling SDK](#) to install the tool and authenticate.

## List All Environment Variables for an Environment

[Try for free](#)

specific project  
and  
environment.

```
</> 1 b2c mrt c
```

Alternative  
command:

```
</> 1 b2c mrt c
```

## Set or Update an Environment Variable

```
</> 1 b2c mrt c
```

To unset an  
existing  
environment  
variable, set its  
value to `null`.

Modifying  
environment  
variables  
redeploys the  
environment.  
The updated  
values are  
available when  
the deploy  
completes.

## Create Environment Variables from an .env File

Try for free

confirmation  
prompt.

```
1 b2c mrt c
```

#### Note

When you add a new environment variable, wait for the redeploy of the bundle to complete, and then deploy a new bundle that uses the new variable.

For a complete list of MRT commands, see [MRT Commands](#) in the B2C Developer Toolkit.
