

Create a Storybook Story

Contents

[Best Practices for Writing a Story](#)[See Also](#)

Create a story for a component for a specific rendered state to show its look and behavior. Add a story in the Storybook UI or use a code file.

To add a story in the Storybook UI, click + in the sidebar and search for your component. For more details, see [Working with Stories](#) and [How to write stories](#) in the Storybook documentation.

After you add a story, a story file is created in the format `{component-name}.stories.tsx`. Update the story file to customize it for the specific rendered state for displaying the component.

This code example defines a Storybook story for a React component named `MyComponent`. It renders `MyComponent` in the `Default` state and exports a story with the primary variant.

```
1 import type { Meta, StoryObj } from '@storybook/react'
2 import { MyComponent } from './MyComponent'
3
4 const meta: Meta<typeof MyComponent> = {
5   title: 'Components/MyComponent',
6   component: MyComponent,
7   tags: ['autodocs'],
8 };
9
10 export default meta;
11 type Story = StoryObj<typeof meta>;
12
13 export const Default: Story = {
14   args: {
15     variant: 'primary',
16   },
17 };
```

Best Practices for Writing a Story

When you write a story, keep in mind these best practices.

- Use one file per component.
- To test components with different screen sizes, use Storybook's built-in viewport toolbar instead of creating separate stories.

[Try for free](#)

- Avoid mocking real implementations incorrectly.
- Use mock wrappers when needed, such as API, context, i18n, Redux, and so on.
