Styling Differences with PWA Kit

PWA Kit styling is largely Chakra CSS-in-JS with prop-based responsive and variant systems. Storefront Next styling centers on Tailwind utility classes, CSS variables, and class-variant composition. The migration is primarily a syntax and architecture shift from style props/theme objects to utility classes and typed variant helpers.

Key Differences

Aspect	PWA Kit (Chakra)	Storefront Next (Tailwind/shadcn)
Approach	CSS-in-JS with JavaScript objects	Utility-first CSS with class strings
Theme Location	<code>app/theme/</code> directory	<code>src/app.css</code> CSS variables
Component Styling	<code>useMultiStyleConfig</code> hook	<code>cva()</code> + <code>cn()</code> utilities
Design Tokens	JavaScript objects (<code>colors.js</code> , <code>space.js</code>)	CSS custom properties (<code>-primary</code> , <code>-background</code>)
Variants	Props-based (<code>colorScheme</code> , <code>variant</code>)	Class-based via CVA
Responsive	Array syntax <code>[base, sm, md, lg]</code>	Prefix syntax <code>sm: md: lg:</code>
Runtime	Generates styles at run time	Pre-compiled utilities
Dark Mode	Theme color mode provider	CSS variables + <code>dark:</code> prefix
Bundle	Includes Chakra UI runtime	Zero runtime (utility classes)
Type Safety	<code>PropTypes</code>	Full TypeScript with <code>VariantProps</code>

Responsive Container

PWA Kit (Chakra):

```
1 <Box px={[4, 4, 6, 6, 8]} maxWidth="container.xxxl" ma
2   {children}
3 </Box>
```

Storefront Next (Tailwind):

```
1 <div className="px-4 sm:px-6 lg:px-8 max-w-7xl mx-auto
```

Button Variants

PWA Kit (Chakra):

```
1 <Button variant="solid" colorScheme="blue" size="md">
2   Primary
3 </Button>
4 <Button variant="outline" colorScheme="black">
5   Secondary
6 </Button>
```

Storefront Next (Tailwind):

```
1 <Button variant="default" size="default">
2   Primary
3 </Button>
4 <Button variant="outline">
5   Secondary
6 </Button>
```

Conditional Visibility

PWA Kit (Chakra):

```
1 <Box display={["none", "none", "none", "block"]}Desktop
```

Storefront Next (Tailwind):

```
1 <div className="hidden lg:block">Desktop only content</div>
```

- Design token systems: Both define colors, spacing, and other tokens centrally.
- Variant support: Both support multiple variants and sizes for components.
- Responsive design: Both provide breakpoint-based responsive utilities.
- Dark mode: Both support light and dark theme switching.
- Accessibility: Both use accessible UI primitives (Chakra built-in, Radix UI in shadcn).

Storefront Conversion Considerations

Keep these considerations in mind when converting a storefront from PWA Kit to Storefront Next.

- Theme Conversion: Convert JavaScript theme tokens to CSS custom properties.
- Responsive Syntax: Convert array-based responsive values `[a, b, c]` to prefix-based `sm:b md:c`.
- Component Props to Classes: Replace Chakra style props with Tailwind utility classes.
- Layer Styles: Convert layer styles to Tailwind `@apply` directives or component classes.
- Multi-part Components: Replace `useMultiStyleConfig` with compound component patterns.
- Variant Logic: Use CVA for variant management instead of Chakra's variant system.
- Pseudo-selectors: Convert `_hover`, `_active`, and so on to Tailwind modifiers `hover:`, `active:`.
